WHAT IS CONSTANT THERAPY?

Constant Therapy is an AI-powered speech, language, and cognitive therapy platform for patients with stroke, aphasia, TBI, and other neurological conditions. SLPs and OTs can use it in one-on-one or group clinical sessions to deliver standardized, personalized therapy through an ever-growing, evidence-based library of 1M+ exercises across 91 cognitive domains. On a smartphone, tablet, or computer, patients can keep practicing between sessions and after discharge as a bridge to their first outpatient SLP or OT visit.

HOW YOUR IRF/IPR BENEFITS

Save Clinician Time

Less prep and reporting during 1:1 sessions, so more time goes to patient care.

1M+ Exercises, Ready to Go

Evidence-based exercises across 91 domains spanning speech, cognition, and executive function.

More Therapy at the Bedside

Between-session practice on smartphone, tablet, or computer, adding therapy beyond standard care.

More Precise Documentation

Digitally measured accuracy and response time reduce reporting time and strengthen therapy notes.

Informed Discharge Planning

Domain-level progress and functional tasks help clinicians assess discharge readiness.

A Bridge Home

45 days of coverage carries patients to their first outpatient SLP visit.

Proven in Inpatient Rehabilitation

CASE STUDY

LARGE INPATIENT REHABILITATION ORGANIZATION

For three years, a large inpatient rehabilitation organization with facilities nationwide has partnered with Constant Therapy to enhance its speech and cognitive therapy programs.

Clinicians may use Constant Therapy in 1:1 and group sessions to minimize prep time, while patients keep practicing at the bedside between sessions. Every exercise is digitally measured for accuracy and response time, reducing reporting and documentation time for clinicians. After discharge, patients continue their personalized program, closing the gap until their first outpatient SLP or OT appointment. This gives the organization confidence that no patient leaves without continued care.

WHAT'S INCLUDED WITH CONSTANT THERAPY ENTERPRISE ACCOUNT

Patient Access

- 45 days of coverage per patient, bridging discharge to the first outpatient SLP visit
- Unlimited patient accounts
- In-clinic use with the clinician through the clinician app
- Patient app on their own device at no cost for 45 days

Clinical Tools

- Unlimited use of the clinician program in 1:1 and group sessions
- Progressive exercises matched to each patient's level
- Functional daily living tasks, such as medication management
- Domain-level progress views to support discharge planning

Data, Support & Security

- Clinician web dashboard with comprehensive reports
- Individual, population-wide, and enterprise-level reports
- Live support for clinicians and patients; live training and printable resources
- SSO, MFA, and other IT, security, and privacy integrations

The result: more therapy beyond standard inpatient care, more precise measurement, and more outcomes-driven decisions from admission through discharge.
